Allowable Subject Matter

1. Claims 1, 3-45, 47-98, 100-105, 107-110, 112-127 are allowable over the prior art of records.
2. The instant application is deemed to be directed to an unobvious improvement over the inventions patented in Pat. No. 6,662,260 and 6,338,107. The improvements comprise a second switching circuit connected between said second segment of said data bus and a third segment of said data bus, wherein said second switching circuit is configured to selectively connect said second and third segments of said data bus such that when said second switching circuit is in a first state, said second switching circuit passes data through from said second bus segment to said third bus segment and from said third bus segment to said second bus segment, and when said second switching circuit is in a second state, said third bus segment is disconnected from said second bus segment and data is passed through from said second bus segment to at least one I/O circuit and from said at least one I/O circuit to said second bus segment (claim 1); wherein said first switching circuit receives a command selecting at least one attached I/O circuit for point-to-point communications, selects said second state of said first switching circuit to disconnect said first bus segment from said second bus segment, and passes data between said first bus segment and said at least one attached selected I/O circuit (claims 17, 36, 64-65, 101, 110); wherein said data bus is a first data bus having a first number of data paths, and said first switching circuit is further configured to connect to a second data bus having a second number of data paths, wherein said first switching circuit is connected between said first and second data buses for selectively receiving data on said first data bus and placing said data on said second data bus and selectively receiving data on said second data bus and

Art Unit: 2111

placing said data on said first data bus (claims 18, 47); wherein a switchable terminator is included in at least one of said plurality of system devices (claim 90); wherein said selective passing of data includes configuring said at least one switching circuit to pass data during WRITE operations (claim 107); wherein said selective passing of data includes configuring said at least one switching circuit to pass data between a memory controller and a selected I/O device during READ operations (claim 108); wherein said selective passing of data includes configuring said at least one switching circuit to pass data between a memory controller and a selected I/O device during WRITE operations (claim 109).

3. The reason for allowance of claims 112-127 can be found in previous Office Action.

The remaining claims, not specifically mentioned, are allowed for the same rationale from the parent claim by dependency.

4 The title of invention has been amended as follows:

-- Data transmission circuit for memory subsystem, has switching circuit that selectively connects or disconnects two data bus segments to respectively enable data transmission or I/O circuit connection --

5. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferable **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
